EDUCATION

University of Illinois Urbana-Champaign
Bachelor of Science in Computer Science

Expected May 2028

TECHNICAL SKILLS

Languages: Python, Java, C++, SQL

AI & Agent Tooling: LangChain, MCP (Model Context Protocol), OpenAI GPT API, Anthropic Claude API, Google Imagen, structured JSON output design, multi-provider orchestration

Infrastructure & Workflow: Git, Docker, Azure Blob Storage, Azure Computer Vision API

ML Libraries: NumPy, Pandas, scikit-learn, TensorFlow, PyTorch

Other Tools: Fusion 360, SolidWorks, KiCad, Microsoft Excel

Coursework: Calculus I-III, Linear Algebra, Data Structures & Algorithms, Intro to CS I & II, Discrete Structures, Probability & Statistics

WORK EXPERIENCE

GenAlx

Backend Engineering Intern

Remote

July 2026 – Present

- Build AI-powered backend services integrating Claude, GPT, and other LLM APIs to automate content generation, lead scoring, and task routing for marketing and GTM teams
- Design multi-model orchestration layer with prompt templating, structured JSON outputs, and retry/fallback across providers; add usage instrumentation to improve reliability and traceability of automated decisions

PM Accelerator

AI Engineering Intern

Remote

June 2026 – August 2026

- Build an MCP-native context layer that watches where teams decide — Slack, Gmail, and Notion — turning scattered conversation into a structured, queryable decision register grounded in source threads
- Design and iterate on RAG pipelines (ingestion, chunking, retrieval) and MCP tool interfaces over permissioned internal data, extracting decisions, owners, and rationale and exposing them to downstream LLM agent workflows for grounded Q&A

MascotGO

Software Engineering Intern

Remote

February 2026 – June 2026

- Built a multi-stage agentic pipeline (LangChain + LLMs) with dedicated agents for context enrichment, style enforcement, quality review, and post-processing to generate 3,300+ branded hero images
- Implemented checkpoint/restart, exponential backoff, rate limiting, and per-run cost tracking across OpenAI DALL-E 3, Google Imagen, and Azure Blob Storage/Vision APIs

UIUC Center for Health Informatics

Undergraduate Researcher

Urbana, IL

January 2026 – May 2026

- Build and evaluate LLM pipelines that analyze patient interview transcripts for clinical completeness, identifying missing questions and generating structured, actionable feedback for healthcare providers
- Collaborate with faculty to iteratively improve pipeline accuracy, reducing coverage gaps across multiple interview domains

Harvard Spatial Data Lab

Research Intern

Remote

March 2024 – December 2024

- Analyzed police records under Assistant Professor Lan (University of Toledo) using geospatial and historical feature engineering to build an ML model predicting crime patterns for academic and policy audiences

PROJECT EXPERIENCE

FirstCall

Python, Pipecat, NVIDIA NIMs, Twilio, Supabase

May 2026

- Built an AI voice intake agent for personal injury law firms on an all-NVIDIA pipeline (Parakeet STT, Nemotron-3-Super LLM, Magpie TTS) orchestrated by Pipecat; classifies case severity mid-call from accident details and injury severity
- Integrated a Cekura evaluation loop to auto-score call transcripts and self-patch the system prompt on failures; deployed on Pipecat Cloud with Twilio and a Supabase + S3 post-call pipeline

Limit Order Book Prediction Engine

Python, PyTorch, scikit-learn, Streamlit, Coinbase/Binance API

March 2026 – May 2026

- Built an end-to-end mid-price prediction system ingesting live Level 2 order book snapshots, engineering features (queue imbalance, microprice, spread dynamics, order flow toxicity)
- Trained a baseline classifier and DeepLOB-style model for short-horizon price direction; deployed a low-latency REST inference service and Streamlit trading terminal with real-time depth monitoring and prediction cards

EXTRACURRICULAR ACTIVITIES & LEADERSHIP

Illini EV Concept – Electrical Team

Project Lead

Urbana, IL

August 2025 – Present

- Designing and fabricating a custom PCB integrating a 3-axis accelerometer for vehicle motion sensing, transmitting real-time speed data via CAN bus; leading engineers through design reviews and fabrication timelines
